

BURN RESPONSIBLY

- Check with your local fire department to see if debris burning is allowed in your area as fire restrictions may vary between cities and rural fire districts.
- Scrape a fire trail down to mineral soil around the entire pile, before conducting the debris burn.
- Always have water and fire tools on site for quick suppression.
- Stay with the fire while it is burning and ensure that the pile is extinguished before leaving the area.
- Call 911 immediately if your debris burn escapes containment.
